

World's No.1 for **Turf** Protection

What is Ice conversion? and Why Terraplas?

Ice conversion Covers

In today's Worldwide economy, ice arenas need to use their venues for non-ice events to generate additional revenue.

Imagine what revenue levels could be achieved if in-between ice sessions your facility could host:

Concerts

Indoor Football....

Large Scale Dinners....

Wrestling Matches....

Religious Gatherings/Conferences Tradeshows.....

Basketball.... or gain extra seating for smaller ice shows

Why terracover-ICE® is superior to all other products.

The use of a terracover-ICE® conversion cover allows a multitude of events to take place, **without removing the ice!**

This provides the ability for the fastest possible conversions, from ice pad, to non-ice event and back again, meaning far less costs incurred!

terracover-ICE® has been designed to fulfill the following exacting criteria

- The best insulation of any system available
- Speed and ease of install and removal
- No specialised equipment needed
- Long lifespan
- Bears the weight of forklift trucks/cherry-pickers
- Interlocking system with no gaps
- Minimum shrinkage
- Easy to clean and store
- Good looks
- Reasonable price

The unique approach of Terraplas in product development is based on using the finest quality materials to achieve the most beneficial conditions for ice conversion covers.

Easy Handling

terracovert-ICE® is designed for ice arenas who wish to be truly multi-functional - ice hockey one day, basketball the next, and a concert, trade show or exhibition the day after that.

terracovert-ICE® is light, easy to handle and quick to fit without any specialized equipment.

How long does it take to transform an ice arena into a concert hall or exhibition centre? If you're using terracovert-ICE®, installing or removing takes only an hour and a half!

Stronger and Faster

terracovert-ICE® is supplied in solid panels, 2 metres x 2 metres x 35mm (6ft 7ins x 6ft 7ins x 1.25ins) and each 4 square metre (43 square feet) panel locks to its adjacent panel by means of 8 camlocks, which take fractions of a second to lock and unlock. All panels overlap to provide one continuous flat floor. Being solid (i.e. not in "rolls") and interlocking means that the system is tremendously strong, so it can easily withstand the weight of a fully loaded fork-lift (with pneumatic tires) carrying chair pallets, thus ensuring the fastest set-up and breakdowns.

Safety

Safety is of paramount importance when large crowds are involved and terracovert-ICE® is the safest of all ice covers. The solid, totally interlocked floor ensures that there are no tripping hazards, and the top surface has an integral non-slip pattern in the form of raised chevrons.

Insulation

terracovert-ICE® is a unique, patented design which offers the very best in thermal insulation being filled with foamed polyurethane and because the top surfaces overlap there are no gaps between the tiles to let the cold through or melt the ice.

The finest insulation.....

Even with bare feet
