

terrapias® the product that pioneered Turf Protection!

Originally developed in 1991 in consultation with Wembley Stadium, one of the World's busiest concert venues, **terrapias®** is now used internationally by stadiums/arenas wishing to make their venue truly multi-purpose by protecting their grass for events such as concerts, exhibitions, dinners, graduations and religious ceremonies.

The use of **Terrapias** Products, uniquely, allows for a concert to be held one day and a game the next, with results proven time after time.

*Wembley 1991
ready for Rod Stewart*

terrapias® is also used extensively in other venues such as public parks, racecourses and stately homes for walkways, show stands and hospitality areas.

Terrapias has a strategic product development policy, ensuring that we continue to lead the turf protection market internationally. New products have been added to complement the range, whilst maintaining our mainstream systems.

We have recently enhanced our flagship product **terrapias®** by incorporating a specially designed integrated anti-slip surface. Other considered slight modifications have resulted in a product with a modern approach that will also lock to the original design to maintain continuity.

The growing demand on venue managers to maximise revenue necessitates regular use of stadiums/arenas for non-sporting events. The experience **Terrapias** has gained since inception gives us unrivalled knowledge of the requirements of the entertainment business in this environment.

Price DOES Matter !

*Every **terrapias®** system purchased since 1991 is STILL in use today!!
Some have been rented out numerous times each year & are still going strong! No other manufacturer can match this performance.*

terrapias[®] specifications:

Internationally acknowledged as the best systems available for turf protection, **MOST** of the World's Multi-use National Stadiums have purchased Terrapias products! Many more regularly rent them!
