

terraturf® the best entry level protection available!

terraturf® from Terraplas, is designed for pedestrian use to protect the grass playing area at Stadiums when they are being used for non-sporting events.

Prior to despatch the tiles are pinned together in 1m x 1m; (3'4" x 3'4") or 2m x 1m (6'8" x 3'4") blocks that 'snap' together quickly and easily without any specialised equipment.

Very importantly, when lifted they maintain their pinned format!

Like all other products in the Terraplas temporary flooring range **terraturf®** is manufactured from Translucent Virgin High Density Polyethylene (HDPE), that is not only very strong, it also allows sufficient light to pass through to ensure continuous photosynthesis.

Each tile overlaps it's adjacent tiles to prevent rubbish & non-desirable liquids from passing through to the turf.

All of these aspects are vital for the ultimate protection of the pitch!

Price DOES Matter !

Why buy an inferior quality ground cover when you can have stronger AND better turf protection, for a comparable cost?
