OUR PROCESS

Our collaborative approach ensures that each solution is not just a temporary fix but a strategic enhancement to your venue's capability.

With TERRAPLAS®, you gain a partner who is committed to excellence and driven by the desire to provide solutions that respect both your immediate needs and long-term goals.

1. YOUR REQUIREMENTS

Understanding your specific needs is our priority. We begin by discussing your specifications, budget, and venue's strategic objectives. This initial consultation helps us offer a budgetary quote and provide supporting materials to begin to build a business case that can be presented to your key stakeholders

3. MANUFACTURING & PLANNING

During the manufacturing and planning phase, our skilled team meticulously plans and schedules the production of your custom solution, ensuring all aspects are managed to align with your event calendar. We focus on quality manufacturing and timely delivery, especially when tight deadlines are involved.

2. BESPOKE SOLUTIONS

Next, our experts design a bespoke solution that aligns with your venue's unique challenges, allowing you to present a full business case to your stakeholders. This stage may include creating CAD overlays, conducting detailed site visits, suggested production schedule and revising quotes based on the tailored design requirements.

4. DELIVERY, TRAINING, & INSTALLATION

Finally, we oversee every aspect of delivery, ensuring that all products reach your site as planned. Upon delivery, we offer a comprehensive training program for your events team. Our team works continuously with you to exceed your expectations. The process concludes with a formal handover and a sign-off of all contract terms.

PEDESTRAIN PROTECTION

Protect your arena or stadium surface from the footfall of bustling crowds and light-medium vehicles with pneumatic or air-filled tyres, such as gators and trolleys. This is ideal for keeping your turf pristine during public events.

TerraPlas®

The original and widely valued turf protection solution, designed for both natural and hybrid and synthetic turf.

TerraTrak®

Quickest to install, superior quality and heavyweight versatile turf protection.

TerraFlor®

Flexible and easy-to-handle turf protection, perfect for multi-site operators and rental companies.

TerraTile®

A popular all-round pedestrian turf protection, ideal for diverse events and venue requirements.

TerraTurf®

Cost-effective, durable panels for temporary flooring at events, offering quick and simple installation.

DRIVABLE PROTECTION

Designed to take the weight and stress exerted by heavy vehicles, forklift, stages and up to 100-tonne cranes, our drivable turf protection is ideal for transforming venues into robust event spaces.

TerraTrak®Plus

Among the most popular and superior heavy-duty turf protections, designed for rapid deployment in multi-use venues.

TerraPlas®HD

A refined version of our original, pioneering turf protection system, engineered for durability and vehicle pressures.

ICE PROTECTION

Our ice protection is tailored for ice arenas looking to become multi-functional and generate additional revenue streams without the need to remove ice.

TerraCover®Ice

Offering the best thermal insulation for ice arenas in the industry

PIONEERING TURF PROTECTION

Even in the late 1980's Wembley Stadium was one of the busiest concert venues in the world. Back then, they used roll-out heavy matting and plywood to cover the grass. It may have stopped the concert fans from getting their shoes dirty, but it killed the grass!

Naturally, when TERRAPLAS® designed a system to protect the grass leaving it playable after an event, it was a concept that the professionals at Wembley were keen to be involved with. Through collaboration with pitch specialists and event organisers at Wembley, followed by an intensive two year testing phase, it became clear that TERRAPLAS® had pioneered a system ideally suited to protecting quality stadium turf.

From poker to boxing, rock concerts to the Olympics, London's Wembley stadium is a truly multi-purpose sports and entertainment venue. Their original TERRAPLAS® system was delivered in 1991 and is still in use today.

Despite "copy-cat" products, none can achieve the performance or lifespan of TERRAPLAS®! Our products are used worldwide to protect the quality natural, hybrid or artificial turf at multi-purpose stadiums from the impact of spectators, heavy stages, cranes, forklifts and trucks for mass events with the confidence that the pitch is not under threat.

1990

TerraPlas® was invented in collaboration with specialists at Wembley Stadium. They subsequently purchased the first TERRAPLAS® system for use at a Rod Stewart concert.

1994

TERRAPLAS® USA was established. The Associates Program was developed to provide cost effective rental solutions countrywide.

2000

Specifically developed for the ice arena market, **TerraCover®Ice** offers a highly insulated, strong conversion system which can be installed quickly

2002

The introduction of **TerraFlor®** resulted in the most metres squared of panels that could be transported on a truck!

2005

With an increased panel size for speedy installation, **TerraTile®** is launched.

2010

TerraTrak® Plus was created to allow access over premium turf for heavy vehicles, including 100 ton cranes, without causing damage.

2011

Designed to lock directly to the TerraTrakPlus® system, **TerraTrak®** was introduced for light duty and pedestrian access.

2020

Celebrating 30 years of the pioneers of turf protection!

2020

TERRAPLAS® joins Hughes Safety Showers, a portfolio company of the Justrite Safety Group.

WHY CHOOSE TERRAPLAS?

Based in central England, TERRAPLAS® is globally recognised as the pioneer of turf protection and temporary stadium flooring.

WE'RE THE INDUSTRY LEADERS

Since 1991, TERRAPLAS® has been the originator of turf protection systems, with unique, patented designs that might be imitated – but can never be replicated. No matter the climate, location or event, we have the solution.

PROVEN PERFORMANCE

All products are manufactured from natural high-density polyethylene for superior strength and longevity. With over 30 years of experience, we confidently assure that, even in the most punishing conditions, our systems will endure multiple uses.

QUALITY CUSTOMER SERVICE

We look after you. Our team personally supervises the first installation of your system and trains your staff on the optimum setup and removal of your chosen turf protection, empowering you to manage future events efficiently and confidently.

YOUR TURF DESERVES IT

Our translucent tiles allow UV light to pass through, meaning photosynthesis can continue when your turf is covered. This, alongside our additional unique design features, allows grass to breathe and grow when covered.

LET US MAXIMISE THE POTENTIAL OF YOUR VENUE

2,000,000m²

of turf has been protected
with TERRAPLAS®
since 2017.

260+ VENUES
