

World's No.1 for **Turf** Protection

terraturf[®] - pedestrian turf protection system
(also light/medium vehicles with pneumatic tyres)
The very best entry level turf protection system
on the market.

FACTS about terraturf[®]:

- SAFEST Certified Non-Slip Surface
- LIGHT WEIGHT Each panel @ 2m x 1m = 12kgs/26.4lbs
- EXTREMELY STRONG Low profile product with incredible strength 490psi
- COMPETITIVELY PRICED Best 'Price vs Performance' Entry Level product available
- FASTEST FITTING Each panel connects to it's adjacent panels by the simple means of specially designed "snap" joints

*(1 x panel = 16 tiles @ 2m x 1m pinned together as at the factory.
Maintains configuration on lifting)*

terraturf®

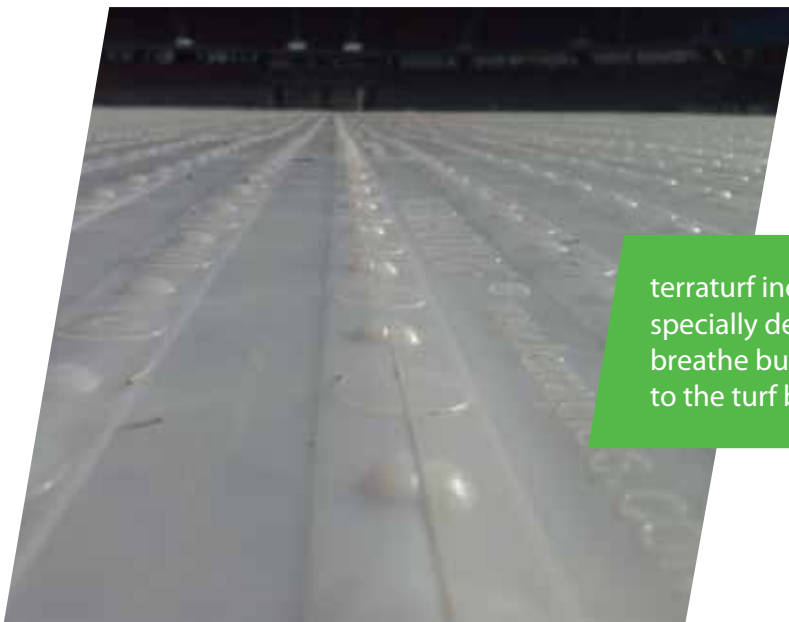

THE VERY BEST ENTRY LEVEL TURF PROTECTION PRODUCT AVAILABLE

terraturf from Terraplas, is designed for pedestrian use to protect the grass playing area at Stadiums when they are being used for non-sporting events.

terraturf is manufactured from the same high quality materials as all of Terraplas' Turf Protection products.

It allows Stadiums and Arenas with limited budgets to take advantage of a plethora of high profile revenue generating special events.

terraturf incorporates an integral anti-slip top surface with specially designed, raised air holes that allow the turf to breathe but at the same time prevent liquids from penetrating to the turf below.

terraturf®

THE VERY BEST ENTRY LEVEL TURF PROTECTION PRODUCT AVAILABLE

Like all other products in the Terraplas temporary flooring range **terraturf** is manufactured from Translucent Virgin High Density Polyethylene (HDPE), that is not only very strong, it also allows sufficient light to pass through to ensure continuous photosynthesis.

Prior to despatch the tiles are pinned together in 1m x 1m; (3'4" x 3'4") or 2m x 1m (6'8" x 3'4") panels that 'snap' together quickly and easily without any specialised equipment.

Each tile overlaps it's adjacent tiles to prevent rubbish & non-desirable liquids from passing through to the turf.

The assembled **terraturf** panels make fitting and lifting very fast.

When lifting, an 'unzipper' is available, which is of benefit when working on large areas. It slides along under the snap edge to split the panels and very importantly, leaves the panels in their pinned configuration ready for the next fit.

terraturf®

THE VERY BEST ENTRY LEVEL TURF PROTECTION PRODUCT AVAILABLE

Whether for hospitality cover, or stadium use for religious gatherings / concerts, terraturf offers exceptional performance at an extremely competitive price.

Price DOES Matter !

Why buy an inferior ground cover when you can have high quality, stronger **AND** better turf protection, for a comparable cost?

terraturf®

SPECIFICATIONS

Dimensions	50cm (20") x 25cm (10") x 25mm (1") Pinned prior to leaving the factory according to individual requirements. ie panels of 8 or 16 tile configuration (normally 16 tiles = 2m x 1m / 6'6" x 3'3")
Weight	6kgs per m ² / 1.22lbs per ft ²
Loaded Pallet Details	@ 46 rows of 2m x 1m panels = 2m x 1m x 1.32m / 6'6" x 3'3" x 4'6" 622kgs / 1,371lbs
Transportation	2,024m ² /21,786ft ² per 40ft HC container / 2184m ² / 23,508ft ² per std trailer
Material	High molecular weight, high density, polyethylene with UV stabiliser
Method of Manufacture	Conventional Injection moulded
Temperature Range	-20 degrees C to 45 degrees C (-4 degrees F to 113 degrees F)
Loading	Point load 20mm diameter 326kgs/ 1" square = 1,477lbs Spread load 76kN /150mm sq 3,377kN / m ² - 70,546lbs / ft ² 634,919lbs / yd ²
Fire Requirements	UL94HB
Colours	Translucent natural material, which allows the passage of light, ensuring grass growth – without yellowing.
Cleaning	High pressure cold water spray washer/steam cleaner
Warranty/ Life Expectancy	Guaranteed for 4 years but has a realistic life expectancy of around 10 years 30 year warranty against UV degradation
Applications	Temporary flooring to cover natural/synthetic turf for all types of special events
Slip Resistance	Integral slip resistant surface

terraturf links with other Terraplas products by using specially designed transition panels – also manufactured from translucent HDPE.

This provides a smooth transition from one product to the other with no slip/trip hazards.

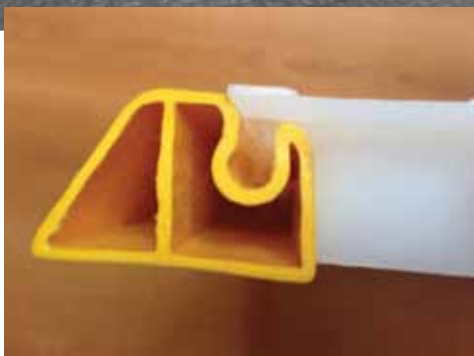

A 28mm core version is available to provide expansion joints, plus when laid in a row across the pitch can accommodate cabling too.

To protect the public from trip hazards, terraturf edge trims have been specially designed to create a smooth, visible transition from earth to tile system – and back.

These ramped trims are available in red & yellow so that they can be fitted in alternating colours to ensure attention is drawn to the edges.

The male and female formats allow each edge ramp to lock to its requisite tile.

Closed terraturf edge trims sit under the 'overlap' edge of the tile so that the snap connectors clip into the purpose-designed channel.

In the Open version, the edge trim clips over the 'underlap' edge of the side to create a tight fit.

Use terraturf edge trims for a smooth, highly visible transition to access any area with no trip hazard.
